

Ontario - Semester 2 - Winter / Summer 2026

Week #	Day	Theme / Topic	Details / Activities	Links
Week 1 Feb 16 - 17	Monday	FAMILY DAY		
	Tuesday	Kick Off	This lesson welcomes students to the Develop the Future program, introduces the 5 phases (Design → Build → Assemble → Launch → Evolve), and sets expectations for the semester.	
	Wednesday	Mac basics for Developers & Meet Xcode	This lesson introduces students to their primary development environment - the Mac - and ensures they are comfortable navigating the basic tools they will use throughout the semester.	https://developer.apple.com/tutorials/develop-in-swift/meet-xcode https://youtu.be/sM3OnATQ-Q
	Thursday	Hello SwiftUI	This lesson introduces students to Xcode and SwiftUI through the creation of a basic prototype.	https://developer.apple.com/tutorials/develop-in-swift/hello-swiftui
	Friday	Designing an app for people + Discovery	This lesson shifts focus from tools to purpose. Students learn that the most successful apps start by solving a real problem for real people. Using the "Designing an App for People" keynote as a guide, the session explores the concept of innovation and why empathy and problem-finding are just as important as coding skills.	https://developer.apple.com/tutorials/develop-in-swift/welcome-to-app-design
Week 2 Feb 23 - 27	Monday	App design Journal + Discovery	This lesson builds directly on the innovation and mind mapping work from the previous session. Students will begin formalizing their app concept using Apple's App Design Journal.	https://developer.apple.com/tutorials/develop-in-swift/welcome-to-app-design
	Tuesday	Stacks Text & Label	This lesson introduces students to Stacks, SwiftUI's core layout tools for arranging views. Students will learn how to organize elements vertically, horizontally, and in layers using VStack, HStack, and ZStack. This lesson introduces students to two of the most common UI elements in SwiftUI: Text and Label. Students learn how to display written content, apply basic styling, and combine text with system images for a more visual interface.	https://youtu.be/cn80HRek83Y https://developer.apple.com/documentation/swiftui/layout-fundamentals https://youtu.be/MERQJIRPFWU https://developer.apple.com/design/human-interface-guidelines/sf-symbols https://developer.apple.com/documentation/swiftui/label https://developer.apple.com/documentation/swiftui/text https://youtu.be/vlEwofY_2w
	Wednesday	SW's	This lesson helps students clearly define the foundation of their app concept by answering five core questions: What?, Who?, Why?, Where?, and How?	
	Thursday	Keynote 101	Students will learn the basics of using Keynote, familiarizing themselves with its tools. They will learn how to add shapes, layer content, and create basic app prototypes through wireframing.	(Optional) https://developer.apple.com/tutorials/develop-in-swift/build-an-interactive-prototype
	Friday	Views Structures & Properties	In this lesson, students follow Apple's Develop in Swift tutorial, Customize Views with Properties, to create a custom SwiftUI view for a multi-day weather forecast.	https://developer.apple.com/tutorials/develop-in-swift/customize-views-with-properties
Week 3 Mar 2 - 6	Monday	App Prototyping time + Testing and validation	Students will use the skills gained in the Keynote 101 Workshop to prototype and test their app ideas. Checking flows, buttons and concepts	https://developer.apple.com/tutorials/develop-in-swift/test-your-app
	Tuesday	Constants, Variables, Data Types	This is the first dedicated syntax lesson in the program. Students are introduced to constants, variables, and basic data types in Swift.	
	Wednesday	Declaring Variables & Types @State basics	This lesson extends students' understanding of constants, variables, and data types by introducing best practices for naming and typing. For State Basics: This short lesson bridges the concept of variables into SwiftUI's reactive UI system. Students are introduced to @State as a special kind of variable that SwiftUI watches for changes.	https://developer.apple.com/documentation/swiftui/state
	Thursday	TextField SecureField & Text Editor	This lesson introduces SwiftUI's most common text input components: TextField, SecureField, and TextEditor. Students will learn how to collect and store user-entered information, customize keyboard types, and use SwiftUI's layout tools to organize input fields.	https://developer.apple.com/documentation/swiftui/textfield https://developer.apple.com/documentation/swiftui/securefield https://developer.apple.com/documentation/swiftui/texteditor - For students wanting to explore real auth https://youtu.be/cPRBc_eqr84 https://www.youtube.com/watch?v=KQFTtGkHvQ
	Friday	GitHub	In this lesson, students will learn how to set up a GitHub account, create a repository, and back up their Swift Playgrounds app project. They'll also explore GitHub Issues as a way to log features, bugs, and ideas for future updates, connecting directly to their Development Plan. This lesson displays to students keeping their apps safe, organized, and ready for continuous improvement.	https://docs.github.com/en/get-started https://www.youtube.com/watch?v=shYFkNh2uQ https://www.youtube.com/watch?v=LTRl8rI48eY
Week 4 Mar 9 - 13	Monday	App Prototyping time + Testing and validation	Students will use the skills gained in the Keynote 101 Workshop to prototype and test their app ideas. Checking flows, buttons and concepts	https://developer.apple.com/tutorials/develop-in-swift/test-your-app
	Tuesday	Image & Async image	In this lesson, students learn how to add and display images in their SwiftUI apps using both local assets and web URLs.	https://youtu.be/dQeOX-WLk2c https://youtu.be/xqZPN6C7R7o https://developer.apple.com/documentation/swiftui/image https://developer.apple.com/documentation/swiftui/asyncimage https://picsum.photos/ Optional photo picker https://youtu.be/cPTmGVY4xIM
	Wednesday	Color Rectangle & Gradient Divider & Spacer	This lesson introduces four foundational SwiftUI views for color and shape: Color, Rectangle, Circle, and Gradient. In this lesson, students will learn how to space and separate content in SwiftUI using Spacer and Divider. Instead of relying on fixed positions or coordinates, students will see how SwiftUI automatically manages layout based on the view hierarchy.	https://youtu.be/-umlj-WDQ https://developer.apple.com/documentation/swiftui/color https://developer.apple.com/documentation/swiftui/shape https://developer.apple.com/documentation/swiftui/gradient https://developer.apple.com/documentation/swiftui/spacer https://developer.apple.com/documentation/swiftui/divider
	Thursday	Layout & Style	In this lesson, students follow Apple's Develop in Swift tutorial, Design an Interface , to build two onboarding screens for an iOS app.	https://developer.apple.com/tutorials/develop-in-swift/design-an-interface
	Friday	Splash Card	This Assemble checkpoint is the first milestone in each student's personal (or duo) app project. Students will create the Splash Screen for their app idea - the opening screen that introduces the app's identity.	(optional) https://youtu.be/258xkh5xV6
Week 5 Mar 16 - 20		MARCH BREAK		

Week #	Day	Theme / Topic	Details / Activities	Links
Week 6 Mar 23 - 27	Monday	Splash Card	This Assemble checkpoint is the first milestone in each student's personal (or duo) app project. Students will create the Splash Screen for their app idea - the opening screen that introduces the app's identity.	(optional) https://youtu.be/258xkh5sVxk
	Tuesday	Control Flow	This lesson introduces students to control flow in Swift using if, else if, and else statements. Students learn how programs make decisions by checking conditions and running different code depending on whether those conditions are true or false.	
	Wednesday	Functions Button Link, Paste Button	This lesson introduces students to functions in Swift as a way to group instructions and reuse code. Students learn how to declare a function, call it, and pass in parameters to customize its behaviour. Building off of the previous lesson this session introduces three SwiftUI interactive elements: Button, Link, and the lesser-known PasteButton.	https://youtu.be/cXa_-E_1xAo https://developer.apple.com/documentation/swiftui/pastebutton https://developer.apple.com/documentation/swiftui/link https://developer.apple.com/documentation/swiftui/button
	Thursday	Buttons & @State	In this lesson, students follow Apple's Develop in Swift tutorial, Update the UI with State , to explore how buttons can trigger changes in the user interface.	https://developer.apple.com/tutorials/develop-in-swift/update-the-ui-with-state
	Friday	Splash Card	This Assemble checkpoint is the first milestone in each student's personal (or duo) app project. Students will create the Splash Screen for their app idea - the opening screen that introduces the app's identity.	(optional) https://youtu.be/258xkh5sVxk
Week 7 Mar 30 - Apr 3	Monday	Loops	This lesson covers a core Swift concept: loops , which allow the program to repeat actions without writing the same code multiple times.	
	Tuesday	Collections	This lesson covers a core Swift concept: arrays , which store collections of values.	
	Wednesday	Lists	In this lesson, students learn how to present a collection of items in a scrollable list using SwiftUI's List and ForEach.	https://www.youtube.com/watch?v=dFBiwR3EhFA https://www.youtube.com/watch?v=aUx0x0VTxE8 https://developer.apple.com/documentation/swiftui/foreach https://developer.apple.com/documentation/swiftui/list
	Thursday	Lists & TextFields	In this lesson, students follow Apple's Develop in Swift tutorial, Create Dynamic Content , to build a SwiftUI interface that stores items in an array and displays them in a list.	https://developer.apple.com/tutorials/develop-in-swift/create-dynamic-content
	Friday	GOOD FRIDAY		
Week 8 Apr 6 - 10	Monday	EASTER MONDAY		
	Tuesday	ProgressViews, Gauges, & Pickers Toggle Stepper Slider Adding Interaction to your app	In this lesson, students explore more SwiftUI controls: ProgressView, Gauge, Pickers, Toggle, Stepper, and Slider. In this Assemble checkpoint, students will expand their personal app projects by adding interactivity and functionality . Building on what they've learned so far - including @State, control flow, buttons, lists, and toggles - this checkpoint moves their apps beyond static splash screens into working, dynamic prototypes.	https://youtu.be/xx4ke5Ds8W0 https://developer.apple.com/documentation/swiftui/gauge https://developer.apple.com/documentation/swiftui/progressbar https://developer.apple.com/documentation/swiftui/toggle https://developer.apple.com/documentation/swiftui/stepper https://developer.apple.com/documentation/swiftui/slider https://youtu.be/SgHw-SA4TFQ
	Wednesday	Adding Interaction to your app	In this Assemble checkpoint, students will expand their personal app projects by adding interactivity and functionality . Building on what they've learned so far - including @State, control flow, buttons, lists, and toggles - this checkpoint moves their apps beyond static splash screens into working, dynamic prototypes.	
	Thursday	Adding Interaction to your app		
	Friday	Form ScrollView	This lesson introduces the Form container in SwiftUI, which creates a structured, scrollable interface for collecting user input. Commonly used in settings screens and account pages. This lesson introduces SwiftUI's ScrollView, which allows users to move through content that doesn't fit on a single screen.	https://youtu.be/X6KXdmCjUCU https://youtu.be/nf06PamAL8 https://developer.apple.com/documentation/swiftui/form https://developer.apple.com/documentation/swiftui/section https://youtu.be/oePvc5SJU https://developer.apple.com/documentation/swiftui/scrollview
Week 9 Apr 13 - 17	Monday	Navigation	This lesson introduces two core SwiftUI navigation tools — UINavigationController for moving between screens and TabView for switching between different sections of an app. Students will learn how to create simple, clear app flows and pass data between screens using bindings.	https://youtu.be/m8KvqSZVMZs https://developer.apple.com/documentation/swiftui/navigationstack https://developer.apple.com/documentation/swiftui/tabview
	Tuesday	Multi Screen Support	Up to this point, students have been working with single-screen apps that display content and handle basic interaction. This Assemble milestone moves them into multi-screen app design, where users can navigate between different views using UINavigationController or TabView.	
	Wednesday			
	Thursday	Classes, Structs, & Enums	This session explores the commonalities and differences between data structures in Swift. Helping students decide when to use each case.	
	Friday	Multi Screen Support	Up to this point, students have been working with single-screen apps that display content and handle basic interaction. This Assemble milestone moves them into multi-screen app design, where users can navigate between different views using UINavigationController or TabView.	
Week 10 Apr 20 - 24	Monday	Classes v Structs	This optional session revisits and deepens understanding of structures and classes in Swift, building on the earlier Structures, Classes, Enums Keynote.	
	Tuesday	Optionals	This optional session gives students a focused space to explore Swift language features that appear frequently in real apps but can feel abstract at first: optionals .	
	Wednesday	Branding	Students will learn the basics of app branding, including designing logos, choosing appropriate color schemes, and creating a cohesive brand identity for their app prototypes.	https://youtu.be/6HKVwDzTKcQ https://youtu.be/srOFdUvRmsc
	Thursday	Data Modeling	This lesson introduces students to the concept of defining their own data models using Swift's struct and enum types. They will learn how to represent app logic inside custom types, track and update data, and write basic unit tests to ensure their code works correctly.	https://developer.apple.com/tutorials/develop-in-swift/model-data-with-custom-types
	Friday	Group Hackathon	In this group hackathon challenge, students will collaborate to design and build a mini SwiftUI app that combines at least three different concepts learned so far. The activity emphasizes teamwork, creativity, and applied problem-solving.	https://youtu.be/LTRI8i4BsY
Week 11	Monday	Group Hackathon	In this group hackathon challenge, students will collaborate to design and build a mini SwiftUI app that combines at least three different concepts learned so far. The activity emphasizes teamwork, creativity, and applied problem-solving.	
	Tuesday			
	Wednesday	Group Hackathon Presentations	Students will plan, build, test, and present their mini app, showcasing how multiple SwiftUI elements work together in a single project.	

Week #	Day	Theme / Topic	Details / Activities	Links
Apr 27 - May 1	Thursday	Save Data	In this lesson, students follow Apple's <i>Develop in Swift</i> tutorial, Save Data , to explore how buttons can trigger changes in the user interface.	https://developer.apple.com/tutorials/develop-in-swift/save-data
	Friday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
Week 12 May 4 - 8	Monday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
	Tuesday	Building your pitch deck with 5W's	This lesson introduces students to the role of a pitch deck in effectively communicating their app idea. A pitch deck tells the story of the app — its purpose, audience, features, and the problem it solves — in a clear, visually engaging way.	
	Wednesday	Presentation Success	A guest speaker will provide practical advice on effective presentation techniques, with a focus on pitching app ideas. This workshop will include interactive elements to practice storytelling and public speaking.	
	Thursday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
	Friday			
Week 13 May 11 - 15	Monday	UI / UX workshop		
	Tuesday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
	Wednesday	App Development Check-in	The App Development Check-In is a mid-project milestone where students present their app ideas and early prototypes in front of their peers and guest judges. This is not the final showcase, but rather a structured opportunity to gather feedback, test their pitch skills, and refine their concepts before the final push. Students should have a basic app demo or prototype ready, along with a prepared short pitch.	
	Thursday	Reflection on Feedback & User testing workshop	This session gives students dedicated time to process the feedback they received during the App Development Check-In. The goal is to turn feedback into a clear, actionable plan that will guide the final stages of development before the showcase. Students will also have the opportunity to test their apps in a real-world feedback setting. They will share their projects with peers, teachers, or mentors and collect input on usability, design, and overall experience. The goal is to help students view their apps from the perspective of a user and make thoughtful improvements based on real feedback.	https://developer.apple.com/tutorials/develop-in-swift/test-your-beta-app
	Friday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
Week 14 May 18 - 22	Monday	VICTORIA DAY		
	Tuesday	Documentation	This session introduces students to Apple's developer documentation as a core resource for independent learning and problem-solving.	
	Wednesday	Future ready skills	This workshop prepares students for future opportunities by teaching them how to build resumes and highlight their skills and experiences from the program.	
	Thursday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
	Friday	Accessibility in SwiftUI	This lesson introduces Accessibility tools in SwiftUI to help students create apps that can adapt to their users needs	
Week 15 May 25 - 29	Monday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
	Tuesday			
	Wednesday			
	Thursday			
	Friday			
Week 16 Jun 1 - 5	Monday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
	Tuesday			
	Wednesday			
	Thursday			
	Friday			
Week 17 Jun 8 - 12	Monday	Swift Student Challenge	Students use the remaining time to continue developing their App & plan for Swift Student Challenge submissions as the co-op wraps up.	https://developer.apple.com/swift-student-challenge/
	Tuesday	App Development	These sessions give students dedicated time to apply what they've learned to their own app projects. The focus is on moving from concepts and small builds toward a fully functioning prototype. Students refine designs, implement new features, troubleshoot issues, and prepare their apps for presentation - all with teacher and mentor support available.	
	Wednesday			
	Thursday	Virtual Showcase	The CEC hosted Virtual showcase available to all students participating within the program	

Week #	Day	Theme / Topic	Details / Activities	Links
	Friday	Showcase Reflections	The Showcase marks the culmination of the program, and students should feel proud of the skills, creativity, and problem-solving they've demonstrated. Over the past semester, they've progressed through both design and code streams, building the foundation for industry-relevant skills and producing an impressive prototype of their original app idea.
